

Custom Playable Ads

for mobile games

Concept / production / QA / network-ready delivery

Fast custom production for teams that want to test more concepts without adding pressure to internal engineering.

heyrtl.github.io/playable

From brief to shipped playable

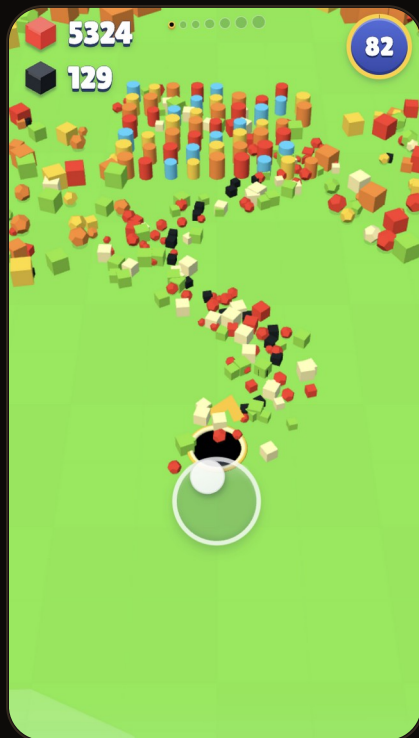

I handle the creative and technical work needed to turn a concept into a network-ready HTML5 build.

- | | | |
|----|---|--|
| 01 | Concept and mechanic adaptation | Translate footage, references, supplied assets, or a brief into a focused playable concept. |
| 02 | Visual production and game feel | Build the interaction, feedback, animation, pacing, and polish that make the mechanic readable. |
| 03 | HTML5 engineering and optimization | Use TypeScript, Canvas, Three.js, or WebGL as the project requires, with mobile performance in mind. |
| 04 | QA and network delivery | Prepare production-ready exports for AppLovin, Unity, Google, Meta, TikTok, and Mintegral. |

Useful as overflow capacity, rapid experimental production, or an additional creative source alongside your current team and vendors.

Different briefs, distinct mechanics
